ACKNOWLEDGEMENT

I sincerely express my gratitude to **Dr. Sanjay Jain**, Principal, CMR Institute of Technology, Bangalore, for providing a supportive academic environment.

I extend my thanks to **Dr. Raveesha K H, HoD, Dept. of Physics, CMRIT** for his valuable guidance and support.

I am especially grateful to my internal guide, **Prof. Keka Mukopadhyaya, , Department of Electronics and Communication Engineering** for her constant encouragement and guidance throughout this project.

I also thank all the faculty members, non-teaching staff, and others who contributed directly or indirectly to the successful completion of this work.

R RAGHU PAUL (1CR25EC161) and

R V RUBITHA(1CR25EC162) ,

SNEHA G UPPALADINNI(1CR25CS181) and

SOAIB SAHEB (1CR25CS182)

Abstract

The Smart Online Job Portal project is a web-based application designed to simplify and modernize the recruitment process for both job seekers and recruiters. The main objective of the project is to provide an efficient digital platform where users can search for jobs, apply online, upload resumes, and track application status, while recruiters can post job openings and manage candidates.

The system is developed using HTML, CSS, and JavaScript with LocalStorage support for backend simulation. The portal provides separate interfaces for job seekers and recruiters, enabling easy interaction between employers and applicants. Users can search jobs based on category, location, skills, and experience.

The project focuses on providing a user-friendly interface, responsive design, fast performance, and secure data handling. The system reduces the complexity of traditional recruitment methods and provides a centralized platform for employment opportunities.

Overall, the Smart Online Job Portal demonstrates the practical implementation of web technologies in solving real-world recruitment and employment challenges.

- Digital Recruitment

Project Title: SMART ONLINE JOB PORTAL WITH RESUME BUILDER

Chapter 1

INTRODUCTION

The rapid growth of the internet and digital technologies has transformed the recruitment industry. Traditional methods of recruitment, such as newspaper advertisements and manual applications, are time-consuming and less efficient. Modern organizations require faster and smarter recruitment solutions to connect employers and job seekers.

The Smart Online Job Portal is designed to provide an effective platform where recruiters can post job vacancies and candidates can search and apply for jobs online. The portal automates the recruitment process and reduces paperwork while improving communication between employers and applicants.

The project provides features such as user registration, login authentication, job searching, online applications, resume uploads, recruiter dashboards, and application tracking. The system is suitable for students, freshers, professionals, startups, and companies.

The project also demonstrates practical implementation of modern web technologies and responsive web design concepts.

1.1 Brief history of Online Recruitment Systems

Recruitment systems have evolved significantly over time. Earlier, organizations depended mainly on newspapers, notice boards, and employment agencies for hiring employees. Candidates had to physically visit offices and submit printed resumes.

With the growth of the internet in the late 1990s, online recruitment websites started becoming popular. Companies began posting vacancies on websites, allowing candidates to apply online. Platforms such as LinkedIn, Naukri, and Indeed revolutionized the hiring process by introducing digital profiles, resume databases, and intelligent job recommendations.

Today, modern recruitment systems use artificial intelligence, cloud computing, and data analytics to improve hiring efficiency and candidate matching.

1.2 Modern Job Portals

Modern job portal systems provide advanced features such as:

Online job applications

Resume management

Skill-based job recommendations

Recruiter dashboards

Application tracking systems

Email notifications

Real-time communication

AI-based candidate filtering

These systems reduce recruitment time, improve hiring efficiency,

and provide better opportunities for both recruiters and job seekers.

Chapter 2

Problem Statement

2.1 Description

The Smart Online Job Portal with Resume Builder is a web-based platform designed to connect job seekers and recruiters through a modern digital system. The project helps users search for jobs, create professional resumes, apply for jobs online, and manage applications efficiently.

Traditional job searching methods are often time-consuming and unorganized. Many students and freshers face difficulties in preparing resumes, finding suitable jobs, and tracking applications. Recruiters also struggle with managing large numbers of applications manually.

This project solves these issues by providing an integrated platform where users can create resumes, upload profiles, search jobs, and apply directly through a single system.

The platform is designed using HTML, CSS, JavaScript, and LocalStorage/JSON for backend simulation, making it lightweight, responsive, and deployable on static hosting platforms like Netlify.

2.2 Challenge Statement

The major challenge is to develop a fully functional and responsive online job portal system that:

- Allows seamless interaction between recruiters and job seekers.
- Provides an easy-to-use resume builder for users with minimal technical knowledge.
- Maintains user data and job application records efficiently.
- Simulates backend functionalities using LocalStorage/JSON without real server-side technologies.
- Ensures responsive design compatibility across desktop and mobile devices.

- Provides secure and user-friendly navigation for all users.

Objectives of the Smart Online Job Portal Mini Project:

Primary Objectives:

- To develop a smart online platform for job searching and recruitment.
- To provide an integrated resume builder for creating professional resumes.
- To simplify the job application process for students, freshers, and professionals.
- To help recruiters post job vacancies and manage applicants efficiently.
- To create a responsive and attractive user interface.

Secondary Objectives:

- To reduce manual effort in recruitment processes.
- To improve accessibility to employment opportunities.
- To provide resume templates for different job categories.
- To allow profile management and application tracking.
- To simulate backend storage using LocalStorage/JSON.
- To enhance user experience using modern web technologies.

2.3 Proposed Solution:

The proposed Smart Online Job Portal with Resume Builder is an integrated web application that combines:

- Job searching
- Resume creation
- Recruiter management
- Online applications
- User authentication
- Application tracking

The system provides a centralized platform where users can create accounts, build resumes, apply for jobs, and manage profiles efficiently.

Recruiters can post jobs, view applicants, and shortlist candidates through an organized dashboard.

2.4 Advantages of the Proposed Solution

- Centralized platform for jobs and resumes.
- Easy-to-use interface for students and freshers.
- Saves time and effort in recruitment.
- Reduces paperwork.
- Quick resume generation.
- Efficient application tracking.
- Recruiters can manage applicants easily.
- Accessible from anywhere using internet.
- Responsive on desktop and mobile devices.
- Lightweight and deployable on static hosting.

Chapter 3

3.1 Design Thinking Process

Empathize: Observation of users in households and public areas revealed discomfort and hygiene concerns while using conventional dustbins.

Define: The key requirements identified were contactless operation, quick response time, and simple maintenance. **Ideate:** Multiple automation-based ideas were considered. A sensor-controlled automatic lid mechanism was selected as the optimal solution.

Prototype: A hardware prototype using a sensor, microcontroller, and motor-driven lid mechanism was developed.

Test: The prototype was tested for responsiveness and reliability, showing consistent automatic lid operation.

3.2 Methodology

The methodology of the Smart Online Job Portal with Resume Builder explains the systematic process followed to design, develop, test, and implement the project successfully. The project follows a structured web development approach to ensure smooth functionality, better user experience, and efficient management of job-related activities.

The development methodology is divided into multiple phases as explained below.

1. Requirement Analysis

In this phase, the requirements of both job seekers and recruiters are analyzed carefully.

- ❖ Job Seeker Requirements
- ❖ User registration and login
- ❖ Resume creation facility
- ❖ Job searching and filtering
- ❖ Online job application
- ❖ Profile management
- ❖ Application tracking
- ❖ Recruiter Requirements
- ❖ Recruiter account creation
- ❖ Job posting
- ❖ Applicant management
- ❖ Candidate shortlisting
- ❖ System Requirements

- ❖ Responsive website
- ❖ User-friendly interface
- ❖ Fast performance
- ❖ Secure data handling
- ❖ LocalStorage/JSON-based data management

This phase helps in identifying the functionalities needed for the system.

2. System Design

After requirement analysis, the system architecture and user interface are designed.

Frontend Design

- The frontend is designed using:
 - HTML5 for webpage structure
 - CSS3 for styling and responsiveness
 - JavaScript for interactivity and functionality
- Module Design
- The project is divided into different modules:
 - User Module
 - Recruiter Module
 - Resume Builder Module
 - Admin Module
- Database Simulation Design

Instead of a real backend database, LocalStorage and JSON are used to simulate data storage for:

- ❖ User details
- ❖ Job listings
- ❖ Resume data
- ❖ Applications
- ❖ UI/UX Design
- ❖ Special focus is given to:
 - ❖ Simple navigation
 - ❖ Clean layout
 - ❖ Mobile responsiveness
 - ❖ Easy accessibility

3. Development Phase

In this phase, the actual coding and implementation of the project are performed.

- User Module Development
- Features implemented:
 - Registration form
 - Login authentication
 - User dashboard
 - Profile update

- Job application system
- Recruiter Module Development
- Features implemented:
 - Recruiter login
 - Job posting form
 - Candidate viewing section
 - Application management
- Resume Builder Development
- Features implemented:
 - Resume templates
 - Input forms for:
 - Education
 - Skills
 - Experience
 - Contact details
 - Dynamic resume generation
 - Resume preview and download
- Job Management System

Features implemented:

- Job listing display
- Search and filter options
- Apply button functionality
- Save jobs feature

4. Data Management Methodology

- The project uses LocalStorage and JSON for storing and retrieving data.
- Data Stored Includes
 - User accounts
 - Recruiter details
 - Job posts
 - Resume information
 - Applied jobs
 - Advantages
 - Lightweight implementation
 - No backend server required
 - Easy deployment on static hosting platforms
 - Faster data access

5. Testing Phase

Testing is performed to ensure proper functioning of all modules.

Functional Testing

Checks whether:

- ✓ Login works correctly
- ✓ Job applications are submitted properly
- ✓ Resume builder generates resumes successfully
- ✓ UI Testing

Checks:

- Responsiveness
- Navigation
- Layout alignment
- Mobile compatibility
- Performance Testing
- Ensures:
 - Fast page loading
 - Smooth functionality
 - Error-free operation

6. Deployment Phase

After successful testing, the project is deployed on static hosting platforms such as:

- Netlify
- GitHub Pages
- Vercel

The deployment process includes:

Uploading project files

Configuring hosting

Testing live functionality

7. Maintenance Phase

After deployment, the system can be maintained and updated regularly.

Maintenance Activities

- Fixing bugs
- Updating job listings
- Improving UI design
- Adding new resume templates
- Enhancing security features
- Testing
- Deployment
- Maintenance

3.1 Prototype Description

3.3.1 FLOWCHART

3.3.2 System Diagram

The Smart Online Job Portal consists of the following components:

- Frontend Interface
- Authentication Module
- Job Management Module
- Application Module

- LocalStorage Database Simulation

Fig 3.1 System Architecture

User → Web Interface → JavaScript Logic → LocalStorage Database

Chapter 4

Implementation

4.1 Technologies Used

Technology	Purpose
HTML5	Structure of webpages
CSS3	Styling and responsiveness
JavaScript	Functionality and logic
LocalStorage	Data storage simulation
JSON	Data handling

4.2 Frontend Implementation

The frontend was developed using HTML and CSS. Responsive layouts, navigation bars, forms, cards, and dashboards were designed to create a professional user experience.

Features implemented:

- Homepage
- Login and Registration Forms
- Job Listings
- Recruiter Dashboard
- Candidate Dashboard
- Responsive Navigation

4.3 Backend Simulation using LocalStorage

Since the project is designed as a static website, LocalStorage was used to simulate backend database operations.

The LocalStorage stores:

- User information
- Recruiter accounts
- Job postings
- Application data

This allows the project to function completely without a real backend server.

4.4 Sample Code

```
<div class="job-card">
  <h2>Frontend Developer</h2>
  <p>Company: HireEra Technologies</p>
  <p>Location: Bangalore</p>
  <button>Apply Now</button>
</div>

let jobs = JSON.parse(localStorage.getItem('jobs')) || [];

function addJob(job) {
  jobs.push(job);
  localStorage.setItem('jobs', JSON.stringify(jobs));
}

.job-card {
```

```
background: #fff;  
padding: 20px;  
border-radius: 10px;  
box-shadow: 0 4px 10px rgba(0,0,0,0.1);  
}
```

Chapter 5

5.1 Results and Analysis

The Smart Online Job Portal was successfully developed and tested.

Observations

- Users can register and login successfully.
- Recruiters can post and manage jobs.
- Candidates can search and apply for jobs.
- LocalStorage stores application data effectively.
- The website works properly on both desktop and mobile devices.

Quantitative Results

- Fast page loading speed
- Responsive design compatibility
- Accurate LocalStorage data handling
- Successful job application management

Qualitative Results

- User-friendly interface
- Professional website appearance
- Easy navigation and accessibility
- Improved recruitment efficiency
- Effective implementation of frontend technologies

5.2 Analysis

The project demonstrates how web technologies can simplify recruitment systems. Compared to traditional methods, the Smart Online Job Portal provides faster communication, better accessibility, and improved management of job applications.

Smart Online Job Portal

The use of LocalStorage provides a simple backend simulation suitable for mini projects and static website deployment.

Chapter 6

Conclusion and Future Work

The Smart Online Job Portal with Resume Builder is an efficient and user-friendly web application that simplifies the recruitment and job application process. It provides an integrated solution for job seekers and recruiters by combining job searching, application management, and professional resume creation in a single platform.

The project improves accessibility, reduces manual work, and provides a modern digital recruitment environment suitable for students, freshers, and professionals. The system can further be enhanced using advanced technologies like AI and cloud computing in the future.

Future Work:

Future enhancements may include:

- Real database integration using MySQL or MongoDB
- Backend development using Node.js or PHP
- AI-based job recommendations
- Resume parsing and analytics
- Real-time chat system
- Email notification system
- Cloud deployment and authentication security
- Mobile application development
